Technical information

Productnumber : 26-603.0BL

Product description

The quality suction lifter BO 603.021 is the optimum aid for lifting and transporting gas-tight sheet materials. Regardless of the material, the suction lifter can carry a weight of up to 100 kg incl. 2-fold safety factor. The design of the suction lifter is both elegant and functional. While the large suction cups serve to optimally distribute the vacuum pressure over the outer part of the rubber disc, the wide contact surfaces of the levers ensure ideal power transfer when lifting - whether with the palm or thumb. Large rings also provide additional stability to the rocker arms. The third lever, which can be rotated 90 degrees in two directions and thus narrows the width of the 3-head suction lifter, promises more flexibility in use. Manufactured with tested Bohle quality.

Specifications

Article arrangement: New

Version: with lever system, 3x Ø 120 mm

Loading capacity (kg): 100

Additional specifications: suction disc ø 120 mm

Type: suction lifter

Material: aluminium

Type number: 600-BL

EAN Code (Gtin) 8719424079630
