## Technical information

**Productnumber : 26-601BL**

### Product description

The pump piston BO 601G is a real design highlight - both in design and comfort. It is equipped with a vacuum safety indicator that is clearly visible from a distance and numerous functional details. Due to the high-quality pump mechanism, the vacuum can be built up particularly quickly. On the other hand, the large valve knob allows for faster venting to reduce the vacuum. This makes it easier to attach the suction cup to the material and detach it after use. A larger grip surface also offers the best wearing comfort. A plastic ring placed over the rubber disc provides even more stability and protection. The BO 601G pump suction lifter can handle heavy loads of up to 120 kg and is suitable for all materials and objects with gas-tight surfaces.

The high quality of this product has been confirmed by the TÜV by awarding the GS mark.

### Specifications

Article arrangement: New

Version: with vacuum pump, Ø 213 mm

Colour: white/blue

Type number: 601-BL

EAN Code (Gtin) 8719424079531

Type: suction lifter

Material: plastic

Loading capacity (kg): 120

Additional specifications: suction disc Ø 213 mm
